Technical Support

Dear Rick,

We added a new feature which will figure very prominently into our Command Center Module software now and in the future. 'Events' give the CCM the ability to directly control the game saving a lot of time for the field owner and adding an exciting new element for the players.

Oklahoma D-Day

The lasers were very accurate and it felt like a real game. It was VERY fun and tools like these could be used for Drills and practice, not to mention INDOOR PLAY ANYWHERE!! A big thank you to the people out at D-Day who let me test this out so much.

November 2009 CCM Update

This document contains information about the updated features found in the Command Center Module version 1.208. This version will require that you only update your CCM software.

Update CCM Software

All software updates for your CCM system are provided for free from Predator Games. The UPDATE CCM SOFTWARE function can be accessed by clicking on the SYSTEMS menu option at the top of your screen. Your CCM must be connected to the internet for this function to work. Once you have clicked on the UPDATE SOFTWARE function your system will automatically begin downloading the newest version of our software from our internet server. You will see a progress bar on your screen displaying the status of the download. When the download is complete you will be asked to restart your CCM software in order to activate the new version.

Update Systems

In order for the new features mentioned in this document to function, your individual Eagle Eye or Barracuda systems must be upgraded to version 2.15 or greater. For detailed information on how to upgrade your individual systems please see your User Manual.

Corrections

We have made several updates and corrections to the CCM system in order to eliminate any known software errors that our users may experience. As always, if you do generate an error or notice any odd behavior in the functionality of your CCM please contact our customer support department list below.

New Feature List

The following represents the list of new features found in this version of the software. As mentioned earlier you will need to update your CCM in order to gain the benefits of all the new features.

Events

The addition of Events to the CCM system is a major new feature. Events will create a new and exciting format for players and make life easier for the field operator. Events provide a way for the CCM software to monitor game activity and have an active role in what happens. We have started out with three basic events and will be adding more each month. These first three events consist of:

Lone Survivor - The CCM system will monitor the game and automatically stop it when only one person remains alive. All Predator Games units will receive the end game command telling them to return to base.

Out of Ammo - The CCM system will monitor each player and stop the game for that specific player if they run out of ammunition. This will help prevent players from wasting air or thinking they are still in the game.

Team Win - The CCM will monitor all teams in the game. When only one team remains it will stop the game. All Predator Games units will receive the end game command telling them to return to base.

Currently this will only apply to the creation of Basic Games. We will be adding this feature to Tournament Games in the future. When you create a Basic Game will notice a new option at the bottom of the screen. Simply select the Event you wish to add it to the game.

Game Event No Event

Game ends when only one player is alive.

Team Report

By popular demand we have created a Team Report. The Team Report will accumulate scores by both individual player and by Teams. We even account for players switching teams in between games. You can access this report on the Game Master screen by clicking the Team Report button.

Closed Games Filter

Another popular request has been to add a filter to the Closed Games tab so as to only show the games for a specific date range. This has been requested by fields that are literally filling up the page with all the games they are playing. The Closed Games tab will now default to only show the games that are closed for Today's date. It can easily be adjusted to show any date range.
