for

Eagle Eye 2 Battery
Eagle Eye 4 Battery
Eagle Eye Barrel Assembly
Barracuda 2 Battery
Barracuda 4 Battery
CCM

Includes Software Versions

Current Revision: Nov 2011

There are several products available from Predator Games and they each have certain software that runs on them. Over time, these products and the versions of software used may be changed and updated to accommodate fixes or new features. This document will explain in detail the compatibility between each unit and how they can be used together. It is not definitive and you may find that things work other than how they are described below. This document simply outlines the methods that are known to be most stable.

Current products in use include:

- 2 Battery Eagle Eye
- 2 Battery Barracuda
- 4 Battery Eagle Eye
- 4 Battery Barracuda
- Command Center Module

Please note that units of the same battery type function the same way and share the same software. This document covers the compatibility between 2 and 4 battery units and it does not matter which unit you have within a certain battery classification. Battery type refers to the number of batteries needed for each unit.

Two Battery Units: Eagle Eye and Barracuda

The latest version of software for 2 battery units is 2.17A. No new versions will be available.

In Gun2Gun (g2g) mode:

1. All units will work with each other, no matter what version they are on.
2. All units will work with 4 battery units in g2g mode, no matter what version the units (both 2 and 4 battery) are on.

In CCM mode:

1. Units will work with other 2 battery units on any version in **Basic Games**.
2. Units on any version will work with other 2 battery units in **Custom Games** as long as Medic, Respawn, and Game Events are not used.
3. Units will work with 4 battery units in **Basic Games** only and the 2 battery units must be on version 2.17A.
4. If the CCM is on version 2.32 or later, units will only work with 4 battery units on 3.18A. If the CCM is an older version, than the 4 battery units must be on a version prior to 3.18A.

Four Battery Units: Eagle Eye and Barracuda

The latest version of software for 4 battery units is 3.18V.

In g2g mode:

1. All units will work with each other, no matter what version they are on.
2. All units will work with 2 battery units in g2g mode, no matter what version the units (both 2 and 4 battery) are on.

In CCM mode:

1. Units will work with other 4 battery units on any version in **Basic Games**.
2. Units will work with other 4 battery units in **Custom Games** with any settings (Respawn, Medic, Game Events) as long as all the 4 battery units are on version 3.18V or newer. If units are on different versions, then the game settings Respawn, Medic, and Game Events will not work.
3. Units will work with 2 battery units in **Basic Games** only and the 2 battery units must be on version 2.17A.
4. If the CCM is on version 2.32 or later, 2 battery units will only work with 4 battery units on 3.18A. If the CCM is an older version, than the 4 battery units must be on a version prior to 3.18A.

We recommend that your units are always fully updated to the latest versions:

2 battery units: 2.17A
4 battery units: 3.18V
CCM: 2.32
