Dear Rick,

Introducing irTactical, the future of scenario gaming and law enforcement training. irTactical consists of highly advanced laser tag electronics placed into realistic replicas of popular firearms. Predator Games technology was adapted for use in irTactical products, providing an easy to use interface and trusted system.

Law enforcement now has a realistic training option set above the rest. Scenario players can now use this advanced technology for themed games paralleling reality. The irTactical system provides five advantages over anything else. You can train cheaper, train faster, and train anywhere with ultra realistic, extremely durable gear.

The coming months will bring you more and more content about this exciting new system. Look for the launch of the full website in March, along with the ability to pre-order. Units will begin shipping in June, so be the first to get your hands on the best laser tag system available.

The future of law enforcement training and scenario gaming is here.

*The regular Predator Games newsletter will return next month.*

### The irTactical Training System

The irTactical system consists of a few main components and few minor accessories. Over time, several popular models of guns will

be released. The irM4, modeled after the popular M16/AR15/M4 series of firearms is the first to be sold.

The irM4 looks, feels, and works just like the real thing. Sizing and weight is the same, depending on added accessories. All normal firearms accessories can be deployed on the irM4 including stocks, sights, and grips. It has a selector switch for using semi-auto or full-auto firing modes. Constructed of glass-filled nylon, cast aluminum, and steel, the irM4's durability can withstand harsh use in any environment. Each major component is of a modular design to allow for easy replacement should the need arise. The irM4's electronics are water resistant and ready for hot, cold, wet, or dry circumstances. Long lasting batteries power the gun, and can be recharged using a standard USB cable.

The entire irM4 is powered by the patented SmartMag. A standard 12 gram CO2 cartridge is snapped into the SmartMag and resets the ammo count. The mag is then slammed into the irM4 for an air and magnetic connection. What results is a 30 round magazine that creates realistic noise and felt recoil. Each time a shot is fired, it's subtracted from the total. A player could fire 10 shots, eject the magazine, and pass it to his partner to finish up the remaining 20 rounds. The SmartMag features a special valve for keeping air sealed unless inserted into a gun and is constructed of glass-filled nylon for strength.

The player will also wear the irVest or irHarness for receiving shots. The irVest is a full MOLLE vest with ten sensors and two beepers. Upon getting hit, it will light up and beep differently depending on the mode. The irHarness is a simpler version featuring fewer sensors and beepers. Both variations are powered by a control box sitting in the middle of the back. This glass-filled nylon box is durable and easy to use.

### Who Will Benefit?

---

The irTactical system will benefit several categories of people. Law enforcement and military training departments are the primary beneficiaries of the product, but scenario gamers will also enjoy use. As mentioned before, law enforcement will be able to train faster, cheaper, and anywhere with irTactical. Scenario gamers will have a realistic option for unmatched military simulation fun. The projectile-less system can be used for training in schools, parks, city blocks, banks, or anywhere else. There is no mess or hazard to surrounding structures or people.

For more information on the irTactical system, check out a preview of the coming website at [www.irTactical.com](http://www.irTactical.com) or visit our social sites listed to the left.

### Learning More
